

ABSTRACT

A computer host casing includes a first side board on the left side wall and a second side board on the right side wall and a plurality of connection members fastening to computer
5 host side walls by riveting. The first and second side boards have respectively latch elements located thereon. The latch elements may be moved by hands to latch on latch troughs formed on the side walls of the computer host thereby to facilitate fast assembly, and also provide conveniences for
10 hand carrying and resting on the floor.
